

How to install the ArtScreenSaver 2002

© C.P.Seibt 2002

1

Download the version for Windows or Mac.

2

The Installer will easily, and automatically, install the screensaver.

3

System Requirements - Macintosh:

MacOS 8.6 thru 9.2, PPC processor, 5MB free disk space, 8MB (screensaver). QuickTime 4.0 (5.0 Recommended).

System Requirements - Windows:

Windows 95*, 98, ME, NT4*, NT2000, XP, Pentium/300 or equivalent, 5MB free disk space, 8MB (screensaver). QuickTime 4 (5.0 recommended).

4

Options

Size Options:

- Actual Size: the screensaver-movie will play back at the same size it was created; recommended.
- Proportional: the movie will play back at full screen size, or at the closest approximation which doesn't result in size distortions.
- Fill Screen: the movie will play back at full screen size, even if this results in the size being stretched vertically or horizontally.

Hide Cursor During Sleep:

This is normally checked. If unchecked, this will do two things: first, the cursor will be visible during screensaver operation, and second, the screensaver will not respond to mouse clicks or mouse movement, which allows the user to interact with on-screen buttons

Smoother Video: [Macintosh Only] If checked, playback will use QuickTime's "Play Every Frame" option, which will result in smoother playback on some machines, but may cause audio to be muted.

Mute Audio: [Macintosh Only]

If checked, sound will be off.

Preload into RAM: [Macintosh Only]

If checked, on some computers, the movie will be preloaded into RAM before playback. This will allow the screensaver to function without using the hard disk, and will usually result in smoother playback. NOTE: some operating systems do not support this feature. Also, if the movie file is quite large (approximately over 5MB) there will be a slight delay while the movie is loaded when the screensaver activates.
